

BELUGA CAVIAR is the most famous of all caviars. Beluga comes from the 'Huso Huso' Sturgeon, the largest of all sturgeon species. The Huso Huso sturgeon is native to the Black and Caspian Seas, can live up to 120 years old, and grow to over 1 tonne in weight. The largest one ever caught weighed over 1.5 tonnes.

The rarity of Beluga caviar is related to the fact that this particular sturgeon doesn't ovulate until she reaches around 21 years old. w roe is the largest of all the sturgeon roes – This diameter ranges from 3.2 - 3.6mm!

Our Black Pearl Beluga pearls are smooth and even, with a special sheen, the flavour is full bodied and creamy with a long aftertaste.

The Sturgeon are raised in water, rich in oxygen and with conditions remarkably reminiscent of the Huso Huso's natural environment, resulting in an exceptional product appreciated by Beluga connoisseurs around the world.
