

Ars Italica's Storione Ticino farm is in the north of Italy near Lake Maggiore in the Ticino Park. This is one of the largest sturgeon farm in Europe with more than 60 acres of aquaculture tanks dedicated to breeding the finest species of fish which account for over 20% of the world's caviar production.

Rigorous and traditional techniques are used such as the Malossol method, which in Russian means “low salt content.” For over 25 years, Caviar Masters have been transforming the precious roe into something unique with their expert hands. This is how Ars Italica is able to deliver an environmentally-friendly and luxurious experience for connoisseurs, and those who want to treat themselves to a moment of timeless refinement.

OSCIETRA CAVIAR

Fresh caviar is prepared from the roe of the pure Russian sturgeon (*Acipenser gueldenstaedtii*). The Oscietra caviar has historically been considered one of the most sought-after foods in the world, a precious and valuable caviar, second only to the Beluga.

The word Oscietra (asetra, osetra, oscietre) is the noun that exclusively identifies the caviar prepared with the roe of the Russian sturgeon species.

The large variability present in the grains of the Russian sturgeon has traditionally allowed the grading of different selections of caviar.

The Classic Oscietra caviar has a large sized grain, most frequent colours are dark grey, dark brown and sometimes even black. Roe shell is fairly firm, the texture is usually not too dry with the typical bronze dark reflex. The flavour is pure, tasty and quite rich, the intensity of hints of hazelnut and butter tends to increase month by month as the caviar matures.

Oscietra caviar has historically been considered one of the most sought-after foods in the world, a precious, valuable caviar, second only to Beluga.

ARS ITALICA CAVIAR

Oscietra caviar comes from the Russian Sturgeon, an ancient species originally native to the Black Sea, the Caspian Sea and the Azov Sea.

It is a medium sized fish that can weigh from 30 – 50kg requiring a 9 – 11 year life cycle. Providing a poppy and slightly nutty caviar with large sized eggs and colouring that ranges from dark brown to beige, many consider this to be the most refined caviar.

CAVIAR CHARACTERISTICS

Diameter large 2.7mm/3.0mm

Colours dark grey, dark brown, occasionally black

Texture smooth, not too dry, dark bronze reflex

Roe Shell fairly firm

Character tasty, pure, lightly salted, rich and deep

Notes moderate hint of hazelnut and butter

Ingredients farmed Russian sturgeon roe 96.5%, marine salt 3.5%

Country of Origin Italy

Vacuum Jar/Tins 20g, 25g, 28g, 50g, 100g, 125g, 200g, 250g

Certifications BRC, C.I.T.E.S, IFS

FISH FARM SPECS

Storione Ticino farm is located in the North of Italy (Cassolnovo - PV) near Lake Maggiore in the TICINO Park.

Sturgeons are bred in fresh water basins in a natural environment (outdoor, 4 seasons, with no recirculation water).

Spring water sources 6.000-10.000 liter/second

Extension Area over 350.000m²

Production chain is 100% under control, from fingerlings up to the caviar.

The sturgeon farm productions are certified **F.O.S. Sustainable Aquaculture and Controlled Production TICINO Park**

Juvenile of about 6 months

Adult of about 10 years
